

EMBARQ

MODULAR LOUNGE TABLE SEATING FOR AIRPORTS AND HOSPITALS

Embarq is a modular lounge table system designed for airport terminals, hospital waiting areas and other high-traffic public environments. It provides adaptable table seating solutions that integrate power, improve passenger experience and support efficient space planning in transport and healthcare settings.

EMBARQ MODULAR TABLE SYSTEM

Developed to complement commercial beam seating systems, emBARq allows designers and operators to introduce functional table surfaces within airport lounges, departure areas and healthcare waiting rooms. The system supports integrated charging, durable construction and flexible layouts suited to demanding public spaces.

Designed for High-Traffic Public Environments

- **Airport lounge seating support:** provides convenient work and device charging zones within terminal seating layouts.
- **Healthcare compatibility:** suitable for hospital waiting areas, outpatient clinics and public service facilities.
- **Integrated power options:** USB-A, USB-C and optional charging solutions to meet modern passenger expectations.

- **Durable commercial construction:** engineered for continuous daily use in regulated environments.
- **Flexible configurations:** modular design allows tables to be positioned within beam seating runs or as standalone units.

Power and Connectivity

emBARq tables can be specified with integrated power and charging options, supporting mobile device use in airport terminals and healthcare spaces. Clean cable management solutions ensure a neat installation while maintaining service access for maintenance teams.

Space Planning and Modularity

The modular structure enables designers to create efficient lounge layouts that balance circulation flow, seating density and user comfort. This makes Embarq well suited to airport departure lounges, transport hubs and hospital waiting rooms where adaptability is essential.

Built for Longevity

Manufactured with commercial-grade materials, Embarq supports long lifecycle performance in public environments. Replaceable components and robust structural elements help maintain appearance and functionality over time.

Embarq forms part of our wider [commercial beam seating range](#) and supports [airport public seating projects](#) across large-scale terminal and healthcare developments.

PRODUCT DESCRIPTION

UNIVERSAL DESIGN

Embarq is available in a wide range of widths and lengths, with DDA / ADA-compliant height options.

Wireless Charging Pods are embedded underneath the table surface for seamless integration.

A convenient bag hook is located at each end of the units for passengers to keep their belongings at sight.

VERSATILE POWER SOURCES

Embarq provides multiple AC, USB-A, and USB-C power sources across the length of the units for convenient, safe, and universal charging.
