

PELAGO

Inspired by the Nordic archipelago, Pelago is a modular public seating and planter system designed for airports, passenger terminals, hospitals and high-traffic civic environments. Its soft, organic geometry creates natural flow through large interiors while supporting efficient circulation planning in concourses, waiting areas and healthcare reception spaces.

Developed by Green Furniture Concept, Pelago integrates seating, biophilic planters and acoustic elements into a cohesive architectural solution. The system encourages wellbeing in long dwell environments such as airport lounges, hospital waiting rooms, outpatient clinics and transport hubs. Integrated greenery and timber elements support biophilic design principles, improving spatial comfort in healthcare and aviation settings.

Built for heavy commercial use, Pelago is engineered for durability, sustainability and long lifecycle performance. The structure uses responsibly sourced timber and robust internal framing suitable for international terminals, emergency departments and large public atriums. Modules can be configured in linear runs, islands or curved formations to define zones without hard barriers.

Pelago can be specified with integrated power, charging points and acoustic lighting, supporting modern airport seating requirements and healthcare infrastructure standards. Materials and finishes can be selected to meet commercial fire compliance and cleaning protocols required in

medical and transport environments.

FORMLINE is the exclusive Australian distributor of Green Furniture Concept for airports and passenger terminals, providing specification guidance, layout planning support and national project delivery for aviation and healthcare developments.

PRODUCT DESCRIPTION

A Modular Concept Rooted in Cohesion

With six modular elements, from flowing seating to integrated planters and bins, Pelago invites endless combinations without ever compromising on aesthetic cohesion. Double-curved bent plywood gives the pieces a fluid, sculptural form, while the absence of visible screws and bolts emphasizes visual calm.

The entire concept is designed to scale, from creating cozy seating nooks to anchoring grand layouts, all while maintaining a timeless design language. An optional acoustic element, a reindeer moss ceiling, further immerses visitors in nature-inspired tranquility.

Built for Change. Designed to Endure.

True to Green Furniture Concept's values, Pelago is built for longevity and low environmental impact. It features recycled aluminum, plastics reclaimed from fishing nets, and wood treated with VOC-free finishes. Every element is modular, replaceable, and maintainable, ensuring the product ages gracefully and adapts to changing needs.

Sustainability isn't part of the design—it is the design. Every decision was shaped by circular design principles, resulting in a concept built to last, adapt, and endure with a 15-year warranty and a timeless role in shaping public spaces for the future.

NOTABLE FEATURES

Eight modules including seating, planters, bins and charging options

Fully customizable in colour

Modular and easy to configure

GREEN FURNITURE CONCEPT

Modular seating and acoustic lighting for airports, transport hubs, education, healthcare and large public interiors.

ABOUT GREEN

Green Furniture Concept designs modular seating and lighting systems for high-traffic public interiors, using nature-led forms to guide movement, improve comfort and add warmth.

Sustainability and materials

- Materials are selected to reduce impact, using renewable and recyclable inputs and a high share of recycled/upcycled content where possible.
- Environmental policy focuses on preventing harmful substances and pushing low-tox choices from the design stage.
- Modular thinking supports repair, replacement and reconfiguration to extend product life.

Specifier note: Include your layout intent (runs, islands, bays), power needs and cleaning requirements in your quote request.
